

GPS UNITS
PRICES/RENTALS

For survey grade accuracy at a good price point for a beginner I would recommend the SP60 & Ranger 3 data collector. Assuming you are able to get on the state network that will run about \$13,000 for the GPS Receiver and Data Collector.

Another option is a handheld unit - SP20 CM edition. That will run about \$11,700. This will not be as accurate or reliable as the SP60.

I've attached the data sheets for these to review.

To rent these or something comparable...

GPS receiver and data collector - \$100/Day \$500/WK \$1,500/Mo

CM Grade Handheld unit - \$95/Day \$500/Wk \$1,400/MO
